

The FULL HD camera platform IMAGE1 S offers surgeons a single system for all applications. As a modular camera platform IMAGE1 S combines various technologies (e.g., rigid, flexible and 3D endoscopy) in one system and can therefore be adapted to individual customer needs. Furthermore, near infrared (NIR/ICG) for fluorescence imaging, the integration of operating microscopes and the use of VITOM® exoscopes is possible via the camera platform.

## Features

- Image1 S 3D consists of 3D video endoscopes with a 0° or 30° direction of view
- Lightweight design makes the 3D video endoscopes easy to use
- The 3D video endoscopes from KARL STORZ are autoclavable
- The System generates endoscopic 3D images that are true to life
- Easy to switch between 2D and 3D applications

# Specifications

## Returns on Investments

Flexible and expandable platform  
Easy-to-plan investment in components for new technologies  
Financial benefits in comparison to the new acquisition of single solutions  
Long-term and future-proof solution

## Patient Safety

One use interface for all applications  
Standardized for all specialties  
More efficiency  
More Safety
