

The **Axia SB4** is a four-movement imaging table intended to be used with mobile x-ray units and C-arms for minimally invasive procedures. It uses a cantilevered (diving board) style designed without bellows and an "H" Style base that offers maximum C-arm clearance along the entire cantilevered length. The wide 24" top eliminates the need for arm boards, but still offers them as options if needed, and features a facial cut-out for prone procedures.
