

The **Olympus OFP** endoscopic flushing pump is a peristaltic pump that facilitates the direct washing of debris from the observation site during endoscopic examinations. The Olympus OFP endoscopic pump allow irrigation water to be controlled and directed to the observation site to remove blood or other organic matter that may be obstructing the endoscopic view.

Features

- Use with Olympus gastrointestinal videoscopes.
- Facilitates washing of gastric and colonic mucosa to remove blood and other organic matter to improve visualization.
