

# ECOLAB INTRATEMP

## ABOUT

The **ECOLAB IntraTemp** solution warmer is designed to warm and maintain surgical irrigation fluids at a controlled temperature. By providing continuous access to warmed solutions within the sterile field, the IntraTemp helps support normothermia during surgical procedures without relying on warming cabinets or repeated fluid exchanges. The system uses a dedicated basin and drape setup that allows clinicians to visually confirm fluid temperature before use, reducing uncertainty and variability during procedures. Its simple setup and intuitive operation make it easy to integrate into existing workflows across a variety of surgical environments. Built for daily use, the IntraTemp offers a practical way to maintain consistent fluid temperatures while improving efficiency in the operating room.

## FEATURES

- **Point-of-Use Fluid Warming:** Maintains surgical solutions at a controlled temperature directly within the sterile field.
- **Visible Temperature Control:** Allows staff to verify solution temperature before instillation.
- **Large 6 Liter Capacity Basin:** Accommodates higher fluid volumes for procedures that require continuous irrigation.
- **Simple Snap-In Setup:** Basin and drape design supports quick installation and straightforward operation.
- **Supports Normothermia Protocols:** Helps reduce the risk of fluid-related heat loss when used as part of a comprehensive temperature management strategy.
- **Mobile Design:** Equipped with locking casters for and stable positioning in the operating room.
