

OLYMPUS OER-ELITE

ABOUT

The **Olympus OER-Elite** endoscope reprocessor is designed to provide automated cleaning and high-level disinfection for flexible endoscopes in busy clinical environments. Engineered to support consistent reprocessing results, the system follows validated cycles that help reduce manual handling and improve workflow efficiency. Its user-friendly interface allows staff to easily select and monitor reprocessing cycles, while built-in safety features help maintain proper disinfection parameters throughout each stage. The system is designed to accommodate a variety of compatible endoscopes, making it a flexible solution for endoscopy suites and sterile processing departments. With a focus on reliability and repeatability, the OER-Elite supports infection control protocols while helping streamline daily operations.

FEATURES

- **Automated Reprocessing Cycles:** Performs cleaning and high-level disinfection with minimal manual intervention.
- **User-Friendly Interface:** Simple controls and clear cycle monitoring.
- **Multi-Scope Compatibility:** Designed to work with a range of flexible endoscopes.
- **Integrated Safety Features:** Monitors key parameters to help ensure proper disinfection conditions are maintained.
- **Efficient Workflow Design:** Supports faster turnaround times and helps optimize endoscope reprocessing.
