Surgical Table Accessories

STERIS CYSTO-LIFT KNEE CRUTCH

ABOUT

The **Steris Cysto-Lift Knee Crutch** supports patients in the lithotomy position during urology, laparoscopy, cystoscopy, and gynecology procedures. It features Steris PowerLift technology to make leg positioning easier during surgery. A single handle adjusts the level of lithotomy as well as abduction and adduction, allowing changes to be made without reaching down to the siderail socket or breaking the sterile field. Its padded knee support helps reduce pressure behind the knee, while the lifting mechanism is designed to make limb movement easier for caregivers. The Cysto-Lift Knee Crutch is compatible with a range of Steris surgical tables and supports patients weighing up to 350 lbs (159 kg).

FEATURES

Single-Handle Adjustment: Controls lithotomy level, abduction, and adduction from one convenient handle.

PowerLift Technology: Facilitates leg positioning and limb movement during surgery, helping reduce physical strain on caregivers.

Padded Knee Support: Soft padding helps reduce pressure behind the knee.

350 lb Weight Capacity: Supports patients weighing up to 350 lbs (159 kg).

Clamp Compatibility: Requires two Clip-On Blade Clamps (BF11), which are sold separately.

CAPACITY

Patient Weight Capacity: 350 lb (159 kg)

POSITIONING

Lift Assist: PowerLift stirrup technology for easy leg positioning during surgery

Single-Handle Control: One handle adjusts the lithotomy level and abduction/adduction while keeping the sterile field intact

Table Access: No need to reach the siderail socket to change leg position

Caregiver Safety: Lift-Support Technology helps staff move the limb with less strain

Padding: Soft pad reduces pressure behind the knee

Intended Use: Lithotomy positioning for urology, laparoscopy, cystoscopy, and gynecology procedures
